

Coding a patient in Socrates

When in a consultation in Socrates

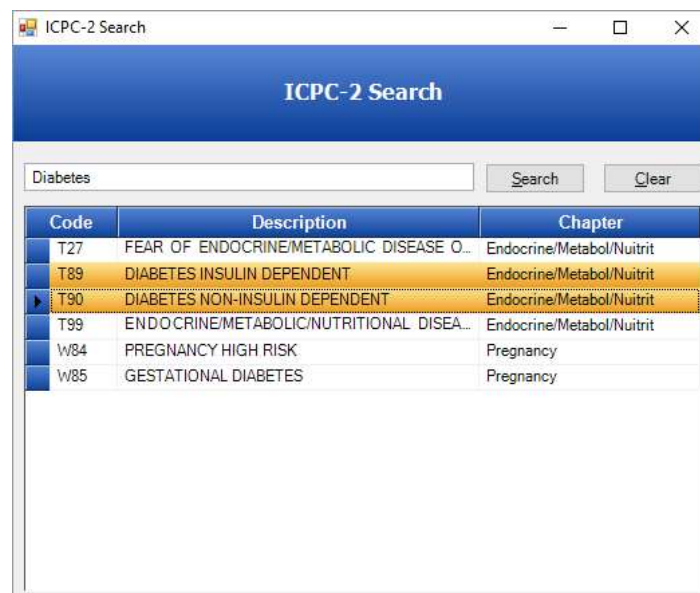

1. Click on Notes

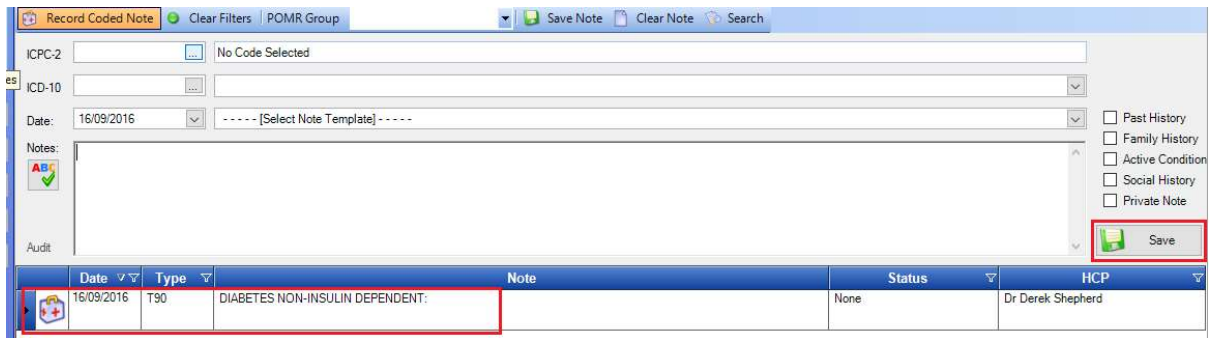

2. You may code a patient using either the ICPC-2 or ICD-10 coding
In our example below we will use ICPC-2 coding: - so we type Diabetes in the field and then Click on the search button just to the right of where we just typed as shown below in red

3. This brings up the following window to allow us to select our preferred coding for Diabetes:

4. We have many choices so we can double click to select the one we require for coding our patient. In our case we will select **T90** to code this patient as Non-Insulin Dependent Diabetes.

5. Next Click on save

The patient is now coded in your system as diabetic using the ICPC-2 Coding system.

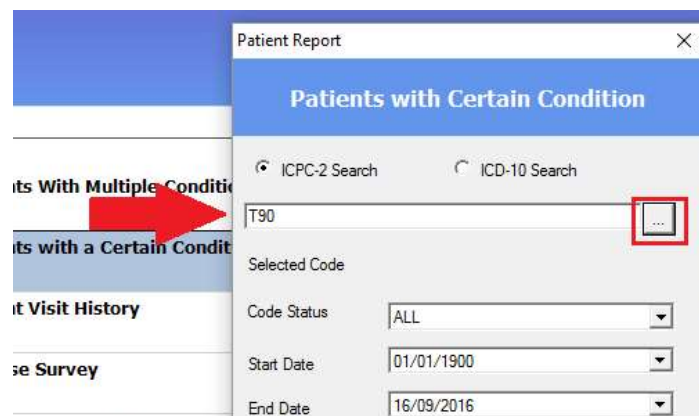

Note: All patients coding using the method above can be reported on for auditing purposes using Socrates built in reports.

Reporting on Investigations

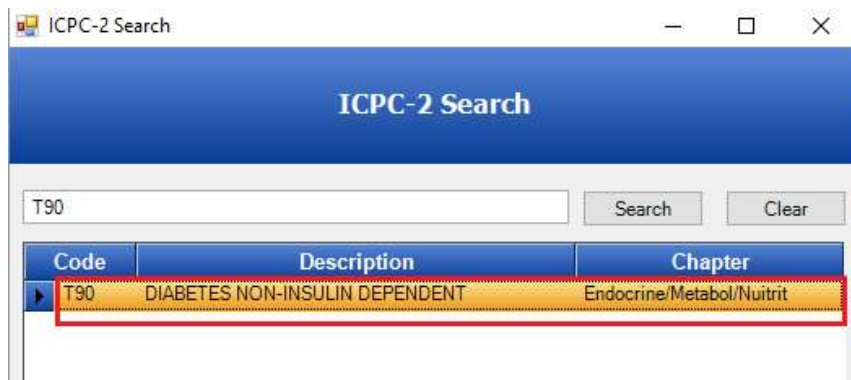

1. Click Reports
2. Click Patient Reports
3. Click "Patients with a certain Condition" Report

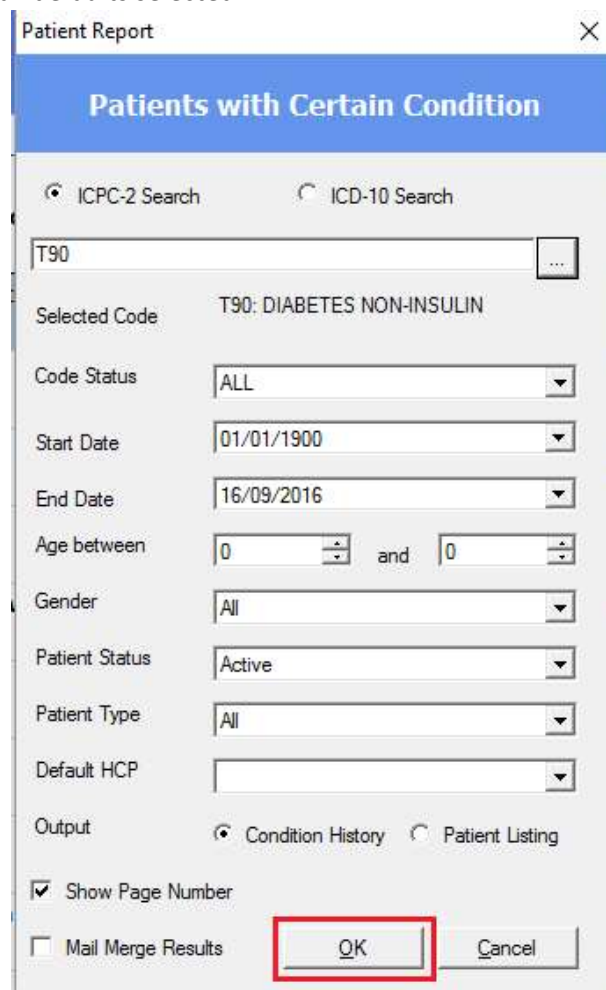

The following window pops up allowing you to select the code for the condition you require:

4. Type in the Condition you wish to report on in the field indicated with the arrow and click on the search box to bring up the following window:

5. Double Click on the Condition as before to bring up the following window and Click on OK to run the report with all defaults selected.
